

Tech 24 Secondary Cleaner Blades

**A technologically advanced cleaner blade
for today's advanced conveyor systems!**

Features & Benefits

- ▶ This long life blade was uniquely developed by fusing a thin layer of hardened material at the molecular level to the base material.
- ▶ The hardened material is a proprietary formula (Tech 24) and is layered on the softer, but more flexible base material to provide a highly effective cleaning edge that wears evenly across the surface.
- ▶ This blade is far superior to mild steel blades which wear very quickly and do not clean as effectively. It is also much longer lasting than blades with hardened inserts which are typically discarded once the 12mm to 18mm inserts wear away or become chipped due to their brittleness with a potential to damage the belt.
- ▶ In addition, the Tech 24 material is Hydrophobic (repels water and other substances) which allows the blade to prevent material buildup on the surface, further improving the cleaning effectiveness.
